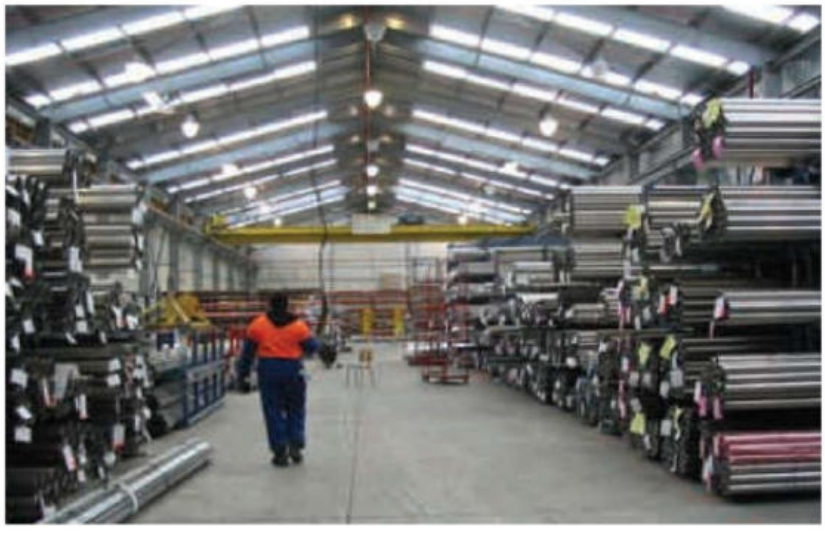
THE COMPLETE SOLUTION

Stainless Steel Pipe, Fittings & Flanges

Stainless Steel Pipe, Fittings & Flanges



Stainless Steel Pipe, Fittings & Flanges

A stainless steel pipe system is the product of choice for carrying corrosive or sanitary fluids, slurries and gases, particularly where high pressures, high temperatures or corrosive environments are involved. Due to stainless steel's aesthetic properties, stainless steel pipe is also used in architectural applications.

Stainless steel pipe can be generally defined as a heavy wall thickness tubing, with dimensions as specified by the American National Standards Institute (ANSI). Pipe dimensions are specified by outside diameter – indicated by the NPS (imperial) or DN (metric) designator and sometimes confusingly referred to as the 'nominal bore' – and wall thickness, reflected in the schedule number. ASME B36.19M covers these dimensions.

Stainless steel pipe and fittings are supplied in the annealed condition to facilitate fabrication and ensure best corrosion resistance. can also supply stainless steel pipe with an abrasive polished external finish suitable for architectural applications.

Welded Pipe

Welded stainless steel pipe is manufactured from 2B or HRAP stainless steel strip – formed to shape, longitudinally welded and annealed.

Large size pipe is fabricated from plate.

All welds are made without the addition of filler metal, except for very large diameters.

Standard welded pipe is in nominal lengths of 6.0 or 6.1 metres.

Manufacturing specification: ASTM A312M – Austenitic
ASTM A358M – Austenitic (large diameter)
ASTM A790M – Duplex

Seamless Pipe

Seamless stainless steel pipe is produced from hollow billets, which are pierced then usually cold drawn until they reach the final desired pipe size, then annealed.

Standard seamless pipe is supplied in nominal lengths of 6.1 metres to DN 150 (NPS 6) and above this in random lengths.

Manufacturing specification: ASTM A312M – Austenitic
ASTM A790M – Duplex

Stainless steel piping systems can be joined by butt welding and, in the heavier 40S and 80S schedules, by threaded connections.

The complete piping system is made possible using complementary fittings and flanges. These are specified by the same DN or NPS designator and schedule numbering system as for pipe.

Butt Welding Pipe Fittings

A piping system using butt welding fittings has many inherent advantages over other forms.

- Welding a fitting to the pipe means that it is permanently leak proof
- The continuous metal structure formed between pipe and fitting adds strength to the system
- Smooth inner surface and gradual direction changes reduce pressure losses and turbulence and minimise the action of corrosion and erosion
- A welded system utilizes a minimum of space

Metflow Supply Butt Welding Fittings in the following forms

- Elbows 45° and 90° – long radius is standard; short radius is also available
- Return bends 180° – long radius is standard; short radius is also available
- Reducers – concentric and eccentric
- Tees – equal and reducing
- Caps
- Stub ends – Type B, to MSS SP-43

Butt welding fittings can be supplied in either seamless or welded construction and are covered by specification ASTM A403M (or ASTM A815M for Duplex grades) and ASME B16.9.

Screwed and Socket Weld Fittings

Piping systems can be connected using screwed fittings – BSP threaded ("150lb") low pressure fittings and NPT threaded (class 3000) high pressure fittings in Grade 316.

Socket weld fittings are used in high pressure piping systems and are available in grade 316L to suit schedule 80S wall thickness piping.

Manufacturing specification: ASTM A182M (Class 3000 NPT and socket weld) and ASME B16.11
ISO 4144 (BSP dimensions)

Pipe Flanges

A flange is a ring of steel (forged, cut from plate, or rolled) designed to connect sections of pipe, or to join pipe to a pressure vessel, valve, pump or other integral flanged assembly.

Flanges are joined to each other by bolting, and are joined to the piping system by welding or threading (or loose when stub ends are used).

The basic types of flanges are:

- Slip-on
- Blind
- Weld neck
- Threaded
- Socket weld
- Lap joint
- Orifice

Forged stainless steel flanges are designed to the following common pressure ratings:
Classes 150, 300, 600, 900, 1500 and 2500. Standard sealing face is Raised Face (RF).

Manufacturing specification: ASTM A182M and ASME B16.5.
(Flanges over NPS24/DN 600 to ASME B16.47, API 60S or BS 3293)

Plate stainless steel flanges are forged or cut and machined from plate – Table 'D', Table 'E', etc.

Manufacturing specification: AS2129

Waterworks flanges to AS4087 and PN16 flanges to EN 1092-1 are also available subject to enquiry.

Types and Applications of Flanges

Slip-on flanges – the flange is slipped over the pipe and then welded both inside and outside to provide sufficient strength and prevent leakage. Slip-on flanges are also used as loose back-up flanges when Type B stub ends are used.

Blind flanges – this is a flange without a centre bore, used to shut off a piping system or vessel opening.

Weld neck flanges – designed to be joined to a piping system by butt welding. They are relatively expensive due to the weld neck, but are preferred for high-stress applications.

Lap joint flanges – this is again similar to a slip-on flange, but has a radius at the intersection of the centre bore and the flange face to accommodate a Type A lap joint stub end. Lap joint flanges and Type A stub ends are not commonly stocked in Australia.

Stainless Steel Pipe – Welded & Seamless – ASTM A312M / ASTM A790M

Grades: 304/304L, 316/316L, 2205

Stainless steel pipe is available in a wide range of sizes in welded and seamless construction, ex-stock or on indent.

- Stainless steel pipe nominal dimensions listed in the table are based on ASTM A312M and ASME B36.19M.
- These dimensions are nominal – substantial tolerances apply – refer to *TechNote 12* and the ASTM and ASME standards for details.
- For other wall thicknesses and larger sizes consult ASME B36.10M; stainless steel pipe may be available to these carbon steel pipe sizes.

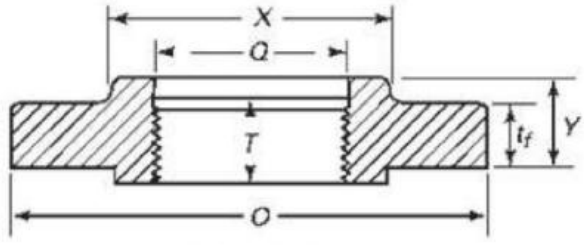
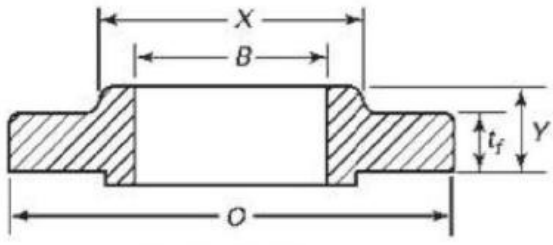
Stainless Steel ASME/ANSI Flanges – Dimensions & Weights

These diagrams relate to the tables of flange specified dimensions on the following pages.

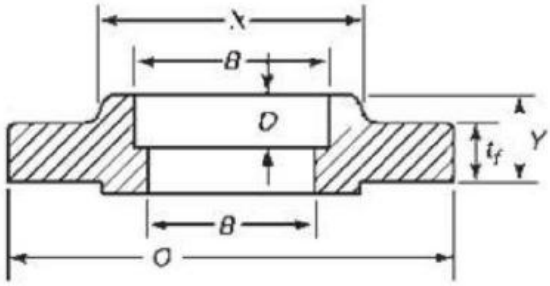
The Notes shown on this page also relate to the tables on the following pages.



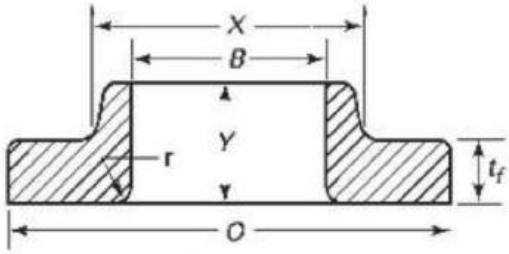
Threaded



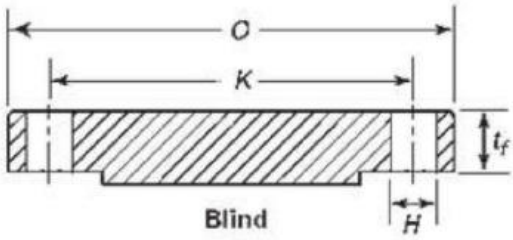
Slip-On Welding



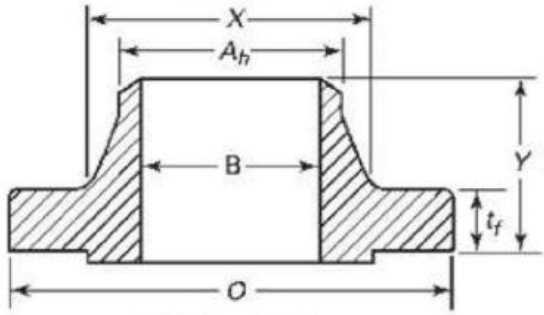
Socket Welding



Lapped



Blind



Welding Neck

Note 1: To be specified by purchase
Note 2: Flange weights are approximate
Note 3: Welding neck flange bore sizes listed are for sch 40S / Standard Wall pipe

Common stock items are –

- Slip-On Welding
- Welding Neck
- Blind

These flanges are available in a very wide range of sizes, ratings and types in 304/304L and 316/316L.
Other grades such as 2205 are available subject to enquiry.

Stainless Steel Table Flanges – Dimensions & Weights

These diagrams relate to the tables of flange specified dimensions on the following pages.
Refer note below regarding terminology of Table flange types.

Types of Table Flanges specified in AS 2129.

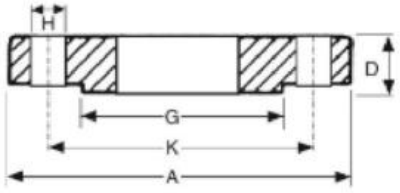
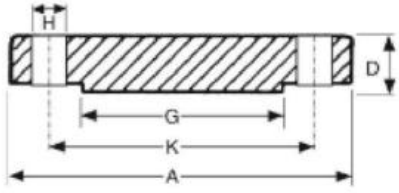
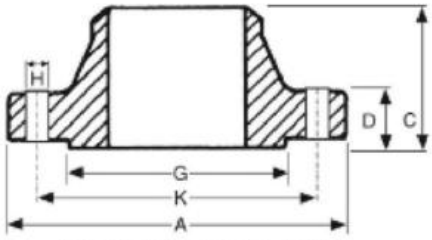


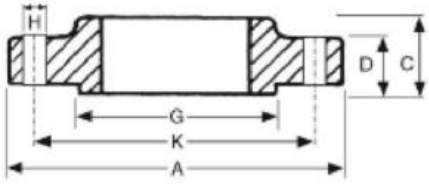
PLATE
"SLIP-ON WELDING"



BLIND
("BLANK")



WELDING NECK (WN)



BOSS

Notes to these diagrams and the following tables of dimensions.

- Diagrams above show the optional Raised Face.
- Standard Table Flange stock is Flat Faced.
- All weights are approximate
- A diametrical clearance of 4mm maximum applies to pipe or tube OD for plate flanges
- The flange thickness "D" dimension includes the raised face height, if a non-standard raised sealing face is present.
- Welding Neck bore is derived from the pipe schedule
- standard stock table flanges are plate and blind type. Note that AS2129 plate flanges are usually referred to by end users as "slip-on welding" flanges and this terminology is also used in product descriptions.
- PN16 "DIN" flanges to EN1092-1 and AS4087 waterworks flanges are also available subject to enquiry.

TOE = Threaded One End

Screwed Low Pressure "150 lb" BSP 316 Fittings

BSP Fittings
Dimensions: generally to ISO4144.
Threading: BS21 (ISO 7-1).
Feed materials – sockets, TOE nipples, TBE nipples manufactured from stainless steel pipe to ASTM A312M.
- Other fittings made from investment castings.
